

Complete Requirements List

Problem Statement #64 — Disaster Relief Supply & Volunteer Coordinator

ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow the Disaster Manager to register and manage shelter supply requests for essential items such as water, blankets, and medical kits.	High	Pass: A request can be entered with item, quantity, shelter location, and urgency. Fail: The system cannot save or update a request.	To maintain an organized record of supplies required at disaster-affected shelters.
FR-002	Functional	The system shall check incoming shelter supply requests against available supplies in the central warehouse.	High	Pass: The system displays whether the requested quantity is available. Fail: Inventory information is incorrect or unavailable.	To identify available resources before assigning relief deliveries.
FR-003	Functional	The system shall prioritize shelter supply requests based on the urgency and criticality of the required supplies.	High	Pass: Critical water/medical needs receive higher priority than low-priority requests. Fail: A low-priority request is dispatched first.	To ensure the most urgent relief needs are addressed first.
FR-004	Functional	The system shall assign relief volunteers to tasks based on their registered skills and availability.	Medium	Pass: A volunteer with the required skill and availability is assigned. Fail: An unsuitable or unavailable volunteer is assigned.	To ensure relief activities are performed by appropriately skilled volunteers.
FR-005	Functional	The system shall allow the Disaster Manager to track the status of relief vehicle deliveries from dispatch to delivery.	High	Pass: Current delivery status is displayed and can be updated. Fail: Status cannot be viewed or updated.	To provide visibility into relief deliveries.
NFR-001	Non-Functional — Performance & Security	The disaster management dashboard shall operate with low network bandwidth consumption and maintain secure access to disaster-relief information.	High	Pass: Dashboard remains usable under simulated low bandwidth and protected information is accessible only to authorized users. Fail: It becomes unusable or permits unauthorized access.	Disaster areas may have limited connectivity while relief information must remain protected.
NFR-002	Non-Functional — Availability	The system shall support offline caching of essential GIS and disaster-mapping data so critical information remains accessible during temporary network outages.	High	Pass: Previously cached essential map data is accessible without a network connection. Fail: Cached data cannot be accessed during an outage.	Disaster areas may have unreliable connectivity, so critical mapping information should remain available offline.
